VLADIMIR SHKODIN

EXECUTIVE SUMMARY

SDET| SOFTWARE DEVELOPMENT ENGINEER IN TEST | SR. QUALITY ASSURANCE AUTOMATION ENGINEER

Backed by strong credentials including 15 years of solid QA experience and Master's in Engineering Technology, advanced command of various testing suites, agile methodologies, and programming experience. Detail-oriented and experienced SDET with hands-on automation and performance End-to-End testing for Mobile, API, Extention, Web, and Desktop Applications. Displaying vast expertise in the design and integration of testing Frameworks into CI/CD pipelines and PRs. Possessing expertise across all phases of the software development lifecycle from requirements gathering through to implementation, support, and enhancement. Skilled in applying testing methodologies, strategies, and developing test plans to meet QA goals. Proactively examines existing processes and leverages enterprise or open-source tools and applications to optimize and improve test automation.

CORE COMPETENCIES

- End-to-End Testing
- Cucumber, Gherkin, Behave
- UI expertise Appium, Selenium, Playwright, and Puppeteer, VRT
- gRPC/API Testing Automation
- CI/CD Integration, DevOps, Jenkins, GitHub Actions, CircleCI, Harness
- Performance, Load Testing
- SQL & NoSQL Testing
- Code review
- White-box Testing
- Docker, Kubernetes
- Visual Regression Testing
- Microservices Testing
- TDD, BDD & ATDD
- Python, JS Programming
- Jenkins pipelines, Bash
- Automation from scratch
- Frontend - Backend Testing
- Optimization for Unit, Functional, Integration Tests
- Test Plan and Test Strategies
- SDLC (Agile, Kanban, Waterfall)
- Smoke, Regression Testing
- Extreme Programming & Scrum
- LLM testing
- Testing Framework Architecture
- AI integration, GraphQL

PROFESSIONAL EXPERIENCE

Lead AI QA Engineer **Jan 2026 - present**
Meta | Remote

- Designing and developing scalable test automation frameworks using Playwright, Appium, and Maestro, integrating automated quality gates into CI/CD pipelines and implementing AI agent-driven testing strategies to improve release reliability.
- Developing custom AI-powered skills and workflows using Claude Code and Cursor to streamline QA processes, enable developers to leverage AI for testing, and accelerate test creation, execution, and defect analysis.
- Identifying and addressing gaps in QA processes and development workflows, conducting risk-based quality assessments, optimizing testing strategies, and ensuring release readiness through continuous quality improvements.
- Establishing and enforcing comprehensive test coverage strategies across frontend, backend, APIs, and system integrations, ensuring critical functionality is validated and quality standards are consistently met before production releases.
- Leading QA efforts for AI-driven testing systems across trigger automation, batch execution, reporting, and automated bug filing.
- Validated complex Butterfly ⟶ RAVENS workflows, including scheduling, trigger execution, ingestion, identity handling, and async job reliability.
- Investigating production-like failures across ACL permissions, queue handoffs, worker allocation, and persistent execution storage.
- Improving batch-run reporting accuracy by fixing verdict calculation, blocked-run detection, incremental run tracking, and historical trend visibility.
- Reviewing 800+ AI-generated bug reports to assess accuracy, reduce noise, and improve automated defect detection quality.
- Partnering with engineering teams to test Flight Simulator trigger flows, parameter handling, and Inspector visibility.
- Supporting test strategy for exceptionally large testing surfaces impacting multiple downstream Quest plugin users.
- Built automated ETL validation suites in PySpark on Databricks, reconciling source-to-target row counts, schema conformance, and business rules across 50+ pipeline tables, cutting manual data-checking effort by ~70%.
- Designing reusable data-quality checks (null/duplicate detection, referential integrity, and threshold-based anomaly alerts) as parameterized PySpark notebooks integrating into Databricks Workflows, catching upstream defects before they reached production dashboards.
- Testing Voice AI systems end-to-end, validating speech recognition accuracy, intent detection, response relevance, latency, interruption handling, and conversational reliability across diverse accents and real-world audio conditions.
- ETL validation into CI/CD, running PySpark test jobs on every Databricks deployment and reducing post-release data incidents by 40%.
- Driving shift-left testing and continuous quality engineering practices by collaborating with engineering and product teams, integrating automated validation into development workflows, and enabling early defect detection through AI-assisted testing and proactive quality monitoring.

Lead QA **Mar 2024 - Jan 2026**
Holistiplan | Remote

- Wrote financial services scenarios with automated Python/shell/bash scripts to ensure data accuracy and model robustness.
- Built Playwright, Selenium, and VRT frameworks for UI testing, optimizing AI/ML interface validation in containerized environments using Docker and orchestrated with Kubernetes.
- Tested and validated AI/ML modules for document parsing, ensuring model accuracy with datasets.
- Used NumPy to create testing frameworks, ensuring data consistency in AI/ML pipelines.
- Conducted model validation by designing test cases simulating real-world edge cases.
- Developed Python and shell scripts to validate data preprocessing in AI workflows for accurate feature extraction.
- Automated performance tests for distributed systems to ensure scalability and reliability using AWS Lambda and CloudWatch.
- Created dashboards to track key metrics and improve visibility into test results for stakeholders.
- Wrote integration tests for gRPC/API services to ensure seamless communication between components
- Collaborated with data scientists to test machine learning models and refine validation processes using AWS SageMaker.
- Monitored automated test executions and analyzed results to identify trends and potential issues
- Optimized test case execution by identifying redundant tests and improving overall testing efficiency with Python-based automation.
- Created and managed Azure DevOps and GitHub Actions pipelines, automating build, test, and deployment workflows.
- Implemented automated GraphQL integration and regression testing using API testing frameworks and CI/CD pipelines, validating nested response data, business rules, schema changes, and end-to-end data consistency across services.
- Designed reusable GraphQL test utilities and data-driven test suites to validate complex queries and mutations, improve API coverage, detect breaking schema changes, and accelerate regression testing across environments.

Sr. QA Automation Engineer
Qwiet.ai, Inc. | Remote

Apr 2021 - Mar 2024

- Validating security testing solutions to finding vulnerabilities in a code by analyzing code property graphs.
- Assessing security testing solutions to detect code vulnerabilities by analyzing Code Property Graphs (CPG) with AI-driven insights.
- Testing and validating AI/ML modules for automating code change decisions and risk detection.
- Integrating Open Duffy service to test environmental gRPC/API differences.
- Designing VRT tests and automatic Bitmaps updates.
- Improving SDLC by integrating automation scripts into Dev's PR and setting up Jenkins Testing Jobs.
- Contributing to the existing Playwright UI testing framework by optimization, extension, and scaling.
- Updating Front End (React) for Visual regression and Selenium tests by adding new locators and attributes.
- Developing microservices testing strategies using Component and Contract testing.
- Migrating CircleCI and Jenkins UI, API, VRT, and CLI tests over GitHub Actions.
- Searching for vulnerabilities in the code base for Java, Python, Javascript, CSharp, Typescript, Kotlin, and Terraform.
- Boosting Automation coverage by integrating custom Python reading stdout scripts for testing CLI tools.
- Developing and testing Visual studio code plugins by using JS.
- Integration Pact workflows (contracts) for GO and Python-based microservices.
- Performing load testing using K6
- Performed GraphQL API validation and troubleshooting using Postman and automated test frameworks, verifying resolver behavior, authorization rules, response structures, and backend data integrity across distributed services.
- Integration performance acceptance tests using Lighthouse
- Detecting vulnerabilities in Docker images and open OSS packages.
- Testing SaaS, AI platforms, Chatgpt Integrations, and various CLI tools
- .

Sr. QA Automation Engineer **Oct.2019 – Apr 2021**
Slickdeals, LLC | Las Vegas, NV | Remote

- Ownership and Leading of Automation Testing for Extension, iOS, Android, Web, API, Frontend, and Backend applications.
- Integrated Visual Regression Tests with BackstopJS into CI/CD pipelines.
- Developed self-healing UI Cucumber Tests for Selenium and Appium using Healenium.
- Designing an Automation Framework for API Testing (microservices, Azure, AWS, internal tools).
- Designed Appium based Test Framework for Android and iOS platforms.
- Adapted existing Android and iOS apps for Automation Testing.
- Added Accessibility locators to Android and iOS native applications using Java and Swift.
- Built Local in-House Farms for Testing Android and iOS devices.
- Migrated Mobile Local Testing Farms to the Cloud using Kobiton.
- Assisted DevOps team with integrating Testing Frameworks into Jenkins PR pipelines using Docker, and Kubernetes.
- Mentored and supporting multiple teams and manual QA engineers in creating Automated Tests.
- Integrated Behavior Driven Development Frameworks into Software Development Life Cycle.
- Designed advanced reporting systems using Allure Visualisation, and TMFJ Adaptavist.
- Integrated Canary releases (Blue-green deployment) and A/B tests.

Software QA Engineer **Sept. 2018 – Oct.2019**

Transact Tech Inc. | Las Vegas, NV

- Created the Automation Testing Framework for Database Driven Systems.
- Integrated computer vision tests by using the OpenCV library.
- Performed Backend Performance and Load Testing, defining bottlenecks and API scalability using Jmeter.
- Planned, designed, executed, and evaluated Frontend performance by using Lighthouse.
- Created Jira cloud plugin for the visualization of test results.
- Developed Appium Test Framework for testing IOS and Android devices.
- Created Puppeteer tests for Chrome extensions.

QA Automation Engineer **Feb. 2017 – Sept. 2018**

Holiday Systems International | Las Vegas, NV

- Designed & Integrated Automation Web Testing Framework by using Python, Web Scraping Tools, and PyQt4.
- Provided End to End Testing Automation scripts for large E-Commerce applications.
- Proficient in white-box testing and code review for Web and API applications based on Django, and Flask Frameworks.
- Performed analysis of the system design, specifications, and developed test plans for Automation Testing.
- Organized weekly meetings with the Onsite manager regarding the Automation status.
- Maintained Automated Scripts and troubleshot issues for each Site Release, Feature, and Small Enhancement Project.
- Integrated execution of the Automated UI and API Test scripts into the Continuous Integration process using Jenkins and Docker.
- Managed Git Branches and used GitHub as central Repository for Automated Test scripts.
- Trained QA Test Analysts in creating and executing BDD scripts through Gherkin (Cucumber) feature files.

QA Automation Engineer **Sept. 2011 - Feb. 2017**

CATE| Russia

- Reproduced and debugged issues reported from the field and provided customized scripts for testing.
- Involved in QA documentation (Test Plan, Scenarios, Peer Reviews).
- Founder of Automation Testing culture in the company.
- Designed and managed Automated Python Testing projects for functional, integration, acceptance, performance, and regression testing of enterprise client/server and web-based projects.
- Participated in the hiring process for Automation and Manual QA Engineers.
- Converted manual functional and regression scripts to keyword data-driven for automated scripts.
- Ensured the quality of the software products in accordance with the company's policy requirements and specifications.
- Led the design and implementation of automation frameworks, significantly reducing test cycle time.
- Developed and maintained test automation frameworks using Python.
- Collaborated closely with development teams to resolve defects early in the SDLC, contributing to a reduction in bug-related delays.
- Conducted regular code reviews and mentoring sessions for junior QA engineers, enhancing the team's technical skills.
- Pioneered the integration of CI/CD pipelines with Jenkins, automating testing for faster and more reliable deployments.
- Optimized test suites by implementing parallel execution strategies, cutting overall execution time by 60%.
- Spearheaded the transition from legacy testing tools to modern, scalable automation platforms.
- Coordinated with cross-functional teams to ensure end-to-end test coverage for complex enterprise systems.
- Documented test results and reported defects using Jira, ensuring full transparency and traceability across the development lifecycle.
- Established a test data management system to handle multiple test environments, reducing redundancy and improving efficiency.
- Managed the development and execution of end-to-end user acceptance tests (UAT) with business stakeholders.
- Led cross-functional defect triage meetings to prioritize issues based on risk and business impact, ensuring timely resolution.
- Championed continuous improvement in testing practices by introducing new tools and methodologies, enhancing overall team productivity.

EDUCATION

- **Astrakhan State Technical University, Russia** **Sept. 2012 – Jul. 2014**
  Master of Engineering Technology: **Major:** Automation and Control
- **Astrakhan State Technical University, Russia** **Sept. 2008 – Jul. 2012**
  Bachelor of Engineering Technology: **Major:** Automation and Control

TECHNICAL PROFICIENCIES

- **Testing Tools/Automation Software:** Selenium WebDriver, Selenium Grid, Appium, Expresso, Adaptavist, Unittest, Pytest, Docker, Allure, Postman, Katalon Studio, SilkTest, TestRail, BlazeMeter, Telerik, Shiftleft, TestNG, QTP, BackstopJS, OpenCV, Percy, Pact, Newman, Browserstack, Kobiton, Ansible, Testim, Playwright, Puppeteer, Robot framework, PyTorch, Zephyr, Cucumber, Behave, Pyspark, X-Ray, XUnit, Kubernetes
- **CI/CD:** TFS, Jenkins, Heroku pipeline, Circlci, Harness, GitHub Actions
- **Issue tracking & Product development:** Jira, Azure DevOps, TFS, Confluence, Trello, Notion, GitHub
- **Platforms:** UNIX/LINUX, Windows, macOS, Android, iOS
- **Load/Performance Testing:** JMeter, Blazemeter, K6, Locust
- **Databases: NoSQL**: MongoDB; **SQL**: SQLlite, MySQL, Microsoft SQL Server, phpMyAdmin, Google bigquery, postgresql
- **Cloud:** DigitalOcean, Linode, Asure, AWS, GCP
- **Programming:** Python, Java, Javascript, Django, FastAPI, Pip, Node, Maven, Gradle, Apache Ant, Npm, Flask, SQL, HTML, XML, JSON, API, Cucumber, Gherkin, Web Scraping, Bash, Shell, Git, Terraform

- **Other tools:** Ngnix, RabbitMQ, GraphQL

SCIENTIFIC ACCOMPLISHMENTS

- Developed device for controlling of down-hole parameters and drilling process 2016
- “Downhole commutator on jet units” **Patent** of the Russian Federation 2015
- “Device for measuring the temperature of the drilling mud” **Patent** of the Russian Federation 2014
- **Publication** in the journal of an international scientific and technical conference in Astrakhan State Technical University VAK (Higher Attestation Commission) Vesnik ASTU “Device for measuring the temperature of the drilling mud”.
- Winner of the “Automation and Control Distributed Systems” at the International Scientific conference in Astrakhan State Technical University 2012.
